## CAREER OBJECTIVE

---

US-based, versatile engineer with 6+ YoE leveraging data science and AI methodologies to deliver cross-organizational solutions in hardware development, analysis, and technical program management.

## WORK EXPERIENCE

---

### Gray Artificial Intelligence, Inc.

Capstone Project Technical Lead | *January 2025 – May 2025*

- Led 4-member university team in scoping and execution of graduate capstone project to reduce datacenter operational costs by optimizing **server hardware validation** process for client
- Developed **temporal convolutional autoencoder** architecture to analyze **multivariate telemetry** data and quantify anomalous behavior relative to baseline, reducing reconstruction loss (**28% → 0.25%**)
- Developed comprehensive GitHub repository and MLflow structure to log experiments and parameters

### Microsoft Azure Hardware Systems & Infrastructure

Manufacturing Engineer II | *March 2019 - Present*

- Driving quality, schedule, and cost optimizations via management of system integrator network.
- Spearheaded cross-organizational **reliability** testing, **design of experiments**, and **statistical process control** reviews to enable vendor rack production and produce **\$8 million** in downstream **savings**.
- Led reconfiguration of supplier server assembly processes to **increase** global **UPH** rate by **15%**. Managed end-to-end development of **Power BI forecasting** tool to balance workload distribution of **400+ programs** across **7** engineering teams and **save 2,400** labor **hours** annually.
- Built schedule duration prediction model to **improve** workload forecasting **accuracy by 32%**.
- Led data consolidation and analysis for rack assembly inspection process, identifying process bottlenecks and optimizations to **reduce cycle time by 25%**
- Developed predictive model for Azure hardware Hackathon team to minimize **H100** server downtime by prioritizing **20,000** datacenter repair tickets according to fault code duration and frequency.

## QUALIFICATIONS

---

**Analytics Skills:** Data Mining, Statistical Analysis, Machine / Deep Learning, Design of Experiments

**Engineering Methods:** Server / Rack Design for Manufacturability, Six Sigma, FMEA, Agile

**Platforms:** Azure Services (AI/ML, DevOps, Fabric), MLflow, Spark, Git/GitHub, PowerBI, JMP

**Languages:** Python, SQL, Julia, KQL, R

**Libraries:** Pandas, PyTorch, TensorFlow, Scikit-Learn, NumPy, Statsmodels, SciPy, Plotly, Matplotlib

**Volunteerism:** UCF Data Science External Advisory Board

## EDUCATION

---

**University of Central Florida**, College of Engineering & Computer Science

Master of Science in Big Data Analytics (GPA: 4.0/4.0) | *May 2025*

**Georgia Institute of Technology**, College of Engineering

Bachelor of Science in Industrial and Systems Engineering
